

**We are Screenbase.**

**Designer, manufacturer & producer of superior office screen systems for a diverse group of commercial businesses.**

---

With over 35 years experience in the design and production of office screens, we have the wide-ranging skill and understanding of working with blue chip companies to individual architects, designers and specifiers.

From large re-fit projects, to tailor made production and single screen solutions, our friendly and knowledgeable team are happy to offer help and advice no matter what size project you wish to undertake.

We offer an extensive range of office screens, which includes the manufacture of both desk mounted and free standing screens. This ensures that whatever your requirements or circumstances, we can always bespoke our designs to suit you.

---

**Stylish, functional & built to the highest standard. Our products encompass quality & effectiveness that have contributed to our wide portfolio of projects.**

---

Screenbase products are designed to be adaptable and flexible to any office environment. Our screen systems are designed and developed to reduce sound yet remain aesthetically pleasing within any office environment.

We provide a range of solutions from desk mounted screens and floor standing screens to glazed and curved breakout screens.

---

## Our products are handmade in Bristol by our skilled team of screen specialists.

---

The manufacture of our product systems requires the closest attention to detail. From the initial specification to the build, every product is hand built at our manufacturing facility in Bristol. We believe that this ensures the individuality of exceptional build quality and performance.

We use the highest quality materials to produce our screens ensuring we select where possible materials that have the highest recycled content. We aim to source as many of our materials locally to minimise our carbon footprint and over 90% of our waste is recycled. We have recently refurbished our factory roof to bring it up to the latest insulation standards helping us to become more energy efficient.

The majority of our products are based on standard sizes up to 1800mm high or 1800mm wide, with the option of specials and bespoke sizes available too. Furthermore, each built product has a vast range of colour and construction options to choose from, making it simple to match even the most diverse project requirements.

**Our products are designed to integrate with diverse office environments making them flexible and durable.**

---

## **Our Products**

---

Screenbase office screens are flexible, hard-wearing and effective in their application. Available in a variety of sizes and constructions, Screenbase office screens offer some of the most effective and unobtrusive products available on the market.

Our British based manufacturing ensures specific sizes and variations in fixing positions can be accommodated at no extra cost in production. All Screenbase products are made to measure, so by specifying any one of our office screen series or systems, the individual quality of design and build is never compromised.

Read on to find out more about our product ranges.

# Our Series 1 product offers an entry-level range of screens with sound absorbing properties.

## Series 1

Our Series 1 product offers an entry-level range of screens with sound absorbing properties.

It is an ideal product for separating workspaces to give multiple users the appreciation of their own individual privacy. Furthermore, Series 1 is a cost effective solution that can be easily adapted to suit user requirements.

It has been created as a hollow pocket screen with multiple layers that in turn help absorb sound that occurs within busy environments.

Series 1 products are very strong and hardwearing but lightweight enough to allow for a quick and simple install on site. As with all Screenbase products, Series 1 is made to measure in order to suit your requirements. Sizes typically start at 350mm up to 500mm for desk mounted screens whereas freestanding screens can reach up to 1800mm high. The product is available in a range of shapes and designs including wave and curve top finishes.

The Series 1 is the ideal choice for office settings that have busy atmospheres, as the unique design ensures individual users can have a sense of ownership in their working space without compromising on the aesthetic quality of their environment. Series 1 also comes with a wide variety of finishes with well over 200 fabrics and colours to choose from.

Call us now to discuss your project requirements.

The Series 2 screen is a robust and effective screen which can be used individually or in groups.

## Series 2

Series 2 is a robust and effective office screen solution fitted with aluminium side trim which has been designed to be used individually or linked in groups.

The floor standing screens provide significant improvements to acoustics as they reduce the travel of sound. Desk mounted screens are solid in construction and provide a flexible and adaptable solution with multiple options for desk fixings.

As with all Screenbase products, the Series 2 range comes with a vast choice of fabrics and finishes with a number of colours and styles designed to suit all user requirements. This also includes the option for wave and curve top screens that offer flexibility in height changes.

Series 2 is ideal for users who are looking for a simple and cost effective solution to separating their working environments.

If you're thinking of specifying Series 2 for your next project, call us now to discuss your project requirements.

# System 5 has been designed as an acoustic product ideal for separating large sections of offices and studios.

## System 5

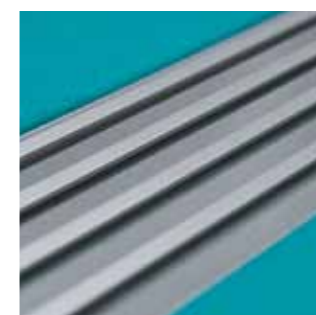

System 5 is an aluminium trimmed system screen offering a unique fixing allowing horizontal rails to fix at any height making it a popular and successful choice for specifiers and interior designers. The system has the ability to allow the integration of glazing to retain visibility without compromising on noise reduction. A range of office applications including meeting spaces, reception areas or individual user areas are just a few of the most popular uses for System 5.

Designed as a hollow pocket screen with a series of densities and multiple layers, the construction allows the absorption of sound, including speech and other distracting noise that occurs within busy working environments. Incorporating a wave top to the screen can soften the appearance of a multiple screen installation.

Besides providing flexible sectioning and noise softening, System 5 is available with a range of extra features such as tool rails, glazing and printed panels. This allows for the ability to have graphic prints applied to glazed areas or monitor arms and trays fixed to tool rails. These features add the finishing touches to what is overall one of the most flexible and effective products available in the market.

Furthermore system 5 can incorporate curved aluminium with either perspex or fabric panels to create stylish pods ideal for meeting and break out areas.

Call us now to discuss your project requirements and quote 'System 5'.

## The System 30 is a flexible and adaptable screen system with a range of accessories and design features.

### System 30

Our System 30 office screen is FIRA performance tested to BS EN 1023 and is arguably the most flexible and adaptable screen system offered by Screenbase. With a range of accessories, add-ons and design features, System 30 is as aesthetically pleasing as it is effective in its application.

Similar to both Series 1 and System 5, the System 30 is designed as an acoustic product with built-in sound absorption qualities. Again, it is ideal for separating large sections of offices and studios with the ability to integrate visibility or privacy without losing the benefits of noise reduction. The most popular office applications include meeting spaces, reception areas, or individual user areas that are most common in call centres.

System 30 is an installers preference when it comes to linking, our unique hinged top caps allow quick access for linking. Screens can be joined screen to screen or in groups of 3 or 4 using aluminium link posts.

To further its flexibility, System 30 can be fitted with a range of extra features such as glazing and tool rails in both its desk mounted and free-standing versions. The toolbar allows for accessories, whilst the glazing adds the ability to personalise or customise print graphics depending on the user choice.

Call us now to discuss your project requirements for System 30.

## Our Sustainability Statement

---

As a UK manufacturer we are committed to operating ethically using Forest Stewardship Council wood, where possible we use recycled and recyclable materials such as aluminium and chipboard. We make every effort to manufacture our products with the minimum of carbon impact.

Screenbase embarked upon an initiative with "The Manufacturing Advisory Service" using their Low Carbon expert to assess our production system and develop a low carbon approach resulting in a saving of over 16 tonnes of CO2 per annum.

These savings have been achieved using a holistic approach which includes:

Full refurbishment of our factory roof structure introducing new technology high efficiency insulation materials and composite north lights, this project was managed and supported by the Business West Improve Your Resource Efficiency Scheme.

Increased sourcing from local suppliers.

Refining of hollow pocket frame production to increase recycled content and reduce weight, impacting on delivery fuel usage. We are committed to regular reviews of materials used constantly striving to increase recycled content.

Reduction in use of cardboard and plastics by re-use and recycling.

Larger wood off cuts and reusable materials are donated to local schools and the Scrapstore Charity.

Introducing specialist waste contractors to recycle wood, pvc, fabric and card off cuts achieving 90% recycling of production waste.

We have future programs to continue our reduction in carbon impact including:

Reduce output of printed media by introducing a donation to an eco friendly charity for every digital download of literature, price lists and data sheets.

Transfer of Aluminium extrusion to local UK supply.

Introduce more efficient woodworking machinery to further cut energy usage.
